BF 80612 Hwy 13 Over Driedmeat Ck Tributary
Hydrotechnical Summary

Channel Capacity :

S = 0.0006
B = 1.5 m, h = 0.8 m, T_h = 3 m
Use n = 0.05

At Bank Height : Y = 0.8 m, V = 0.3 m/s, Q = 1 cms
At Channel Capacity : Y = 1.3 m, V = 0.5 m/s, Q = 2 cms

Historical Highwater Data :

A 1983 report notes that the 2 – 0.6m pipes have run about ¾ full (Q = 1cms). Channel improvements, including construction of the new pipe, were proposed by the drainage board to alleviate flooding u/s.

There are no gauges on this stream. Gauges in the area suggest large runoff events in April 1974, and March 1985. No storms in the storm database exceed 100mm for this area.

Basin Runoff Potential :

d = 35mm, T_p = 40hrs, q = 0.25 cms/km^2.
Gross DA = 13 km^2.
Q_p = 3 cms.

Conclusion :

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 1.3 m, V = 0.5 m/s, Q = 2 cms.
