BF 73665 Hwy 28 Over Muriel Ck
Hydrotechnical Summary

Channel Capacity :

S = 0.001
B = 5 m, h = 1.5 m, T = 8 m
Use n = 0.045

At Bank Height : Y = 1.5 m, V = 0.7 m/s, Q = 7 cms
At Channel Capacity : Y = 2.3 m, V = 1.0 m/s, Q = 16 cms

Historical Highwater Data :

Flooding was reported at the site for June 1962 and April 1963 (u/s farm owner affected). The channel was improved by Water Resources in 1964. A 1961 report notes a HWM with Y = 1.8m and estimates Q = 14cms.

There are no WSC gauges on this stream. Gauges in the area have noted HW in April 1974 and 1997. The largest storms in the storm database are June 1962 with about 135mm of rainfall, followed by June 1986 with about 115m.

Basin Runoff Potential :

d = 40mm, T_p = 20hrs, q = 0.55 cms/km^2.
Gross DA = 865 km^2.
Q_p = 475 cms.

Conclusion :

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 2.3 m, V = 1.0 m/s, Q = 16 cms.
