BF 72312 Local Road Over Cardinal Ck Tributary
Hydrotechnical Summary

Channel Capacity :

S = 0.005
B = 2 m, h = 1.4 m, T_h = 5 m
Use n = 0.05

At Bank Height : Y = 1.4 m, V = 1.3 m/s, Q = 6 cms
At Channel Capacity : Y = 2.1 m, V = 1.9 m/s, Q = 16 cms

Historical Highwater Data :

Reports from 1958 to 1962 refer to HWM's with Y = 1.2 – 1.8m, and estimates of Q = 7 – 11cms. The road was noted to be impassible in April 1976 due to HW and the 3 – 1.2m pipes washed out in June 2002.

There are no WSC gauges on this stream. Gauges in the area suggest HW events in June 1968 and June 1990. The largest storm for this area in the storm database is about 100 mm of rainfall in July 1963.

Basin Runoff Potential :

d = 40 mm, T_p = 20 hrs, q = 0.55 cms/km^2.
Gross DA = 53 km^2.
Q_p = 30 cms.

Conclusion :

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 2.1 m, V = 1.9 m/s, Q = 16 cms.
