BF 08201 Local Road Over Stony Ck
Hydrotechnical Summary

Channel Capacity :

S = 0.001
B = 5 m, h = 1.4 m, T_h = 9 m
Use n = 0.045

At Bank Height : Y = 1.5 m, V = 0.7 m/s, Q = 8 cms
At Channel Capacity : Y = 2.3 m, V = 1.0 m/s, Q = 18 cms

Historical Highwater Data :

HW was noted in 1954 with an abutment washout (sand backfill material). A 1956 report notes a HWM with Y = 1.8m and estimates Q = 17cms.

WSC gauge 05ED001 (DA = 540 km^2, 1973 to 1976) reports Q = 14cms in April 1974. Other gauges in the area suggest HW events in April of 1971, 1974, 1979, and 1997, as well as June 1978 and July 1986. The storm database shows 100mm in June 1973.

Basin Runoff Potential :

d = 40mm, T_p = 20 hrs, q = 0.55 cms/km^2.
Gross DA = 133 km^2.
Q_p = 73 cms.

Conclusion :

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 2.3 m, V = 1.0 m/s, Q = 18 cms.
