# BF 09434 Local Road Over Sturgeon River Tributary
# Hydrotechnical Summary

**Channel Capacity** :

S = 0.0027
B = 2 m, h = 1.2 m, $T_h$ = 4 m
Use n = 0.055

At Bank Height : Y = 1.2 m, V = 0.7 m/s, Q = 3 cms
At Channel Capacity : Y = 1.8 m, V = 1.1 m/s, Q = 7 cms

**Historical Highwater Data :**

A 1960 report estimates Q = 7 – 9cms.

There are no WSC gauges on this stream. Gauges in the area suggest HW events in August April 1971, April 1974, and April 1982. The largest storms in the storm database are about 155mm in July 1953, and 110mm in July 1937 and June 1965.

**Basin Runoff Potential :**

d = 40 mm, $T_p$ = 20 hrs, q = 0.55 cms/$km^2$.
Gross DA = 15 $km^2$.
$Q_p$ = 8 cms.

**Conclusion :**

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 1.8 m, V = 1.1 m/s, Q = 7 cms.
