BF 13923 Local Road Over Iron Ck
Hydrotechnical Summary

Channel Capacity :

S = 0.001
B = 3 m, h = 1.2 m, T_h = 6 m
Use n = 0.05

At Bank Height : Y = 1.2 m, V = 0.5 m/s, Q = 3 cms
At Channel Capacity : Y = 1.8 m, V = 0.8 m/s, Q = 7 cms

Historical Highwater Data :

HW was notes over the grade and 0.6m of ponding at two small culverts in April 1974, with an estimated Q = 6cms.

WSC gauge 05FB003 (DA = 121 km^2, 1978 – 1995) on Iron Ck reports Q = 3.7cms in July 1983. Gauge 05FB002 (DA = 3500km^2, 1965 - Now) on Iron Ck reports Q = 68cms in April 1974, with no other flow over Q = 20cms. A gauging was taken close to the peak with an increase in stage on 3.4m. The largest storms for this area in the database are about 120mm in July 1962 and June 1973.

Basin Runoff Potential :

d = 35mm, T_p = 40hrs, q = 0.25 cms/km^2
DA = 30 km^2
Q_p = 7 cms

Conclusion :

The channel capacity estimate appears to be consistent with historic data and close to the basin runoff potential.

Recommended Parameters : Y = 1.8 m, V = 0.8 m/s, Q = 7 cms.
