# BF 08672 Hwy 617 Over Camrose Ck
# Hydrotechnical Summary

**Channel Capacity** :

S = 0.0009
B = 3 m, h = 1.2 m, $T_h$ = 6 m
Use n = 0.05

At Bank Height : Y = 1.2 m, V = 0.6 m/s, Q = 3 cms
At Channel Capacity : Y = 1.8 m, V = 0.8 m/s, Q = 6 cms

**Historical Highwater Data :**

A 1955 report notes a HWM with the bridge running full (Y = 1.5 – 1.8m), and estimates Q = 6cms. A 1996 design was based on Y = 1.7m and Q = 11cms.

WSC Gauge 05FA010 (DA = 496km$^2$, 1929 – 1930) did not record any HW events. Gauges in the area suggest HW events in April 1974, April 1982, July 1983, April 1985, and April 1997. The largest event in the storm database for this area is June 1965 with 120mm of rainfall.

**Basin Runoff Potential :**

d = 35mm, $T_p$ = 40 hrs, q = 0.25 cms/km$^2$.
Gross DA = 78 km$^2$.
$Q_p$ = 20 cms.

**Conclusion :**

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 1.8 m, V = 0.8 m/s, Q = 6 cms.
