BF 07805 Local Road Over Dogpound Ck
Hydrotechnical Summary

Channel Capacity :

S = 0.0012
B = 14 m, h = 3.0 m, T_h = 22 m
Use AT equation

At Bank Height : Y = 3.0 m, V = 1.7 m/s, Q = 100 cms
At Channel Capacity : Y = 4.0 m, V = 2.1 m/s, Q = 180 cms

Historical Highwater Data :

A 1971 report notes a HWM with Y = 3.7m. A 1985 report notes that the structure washes out every other year due to ice.

There are no WSC gauges on Dogpound Ck. Nearby gauges with longer records show a wide variety of flood responses, with some of the more common being in June 1990 and May 1967. The largest storms in the database for this area are June 1970 and June 1928 with about 120mm of rainfall. There are many other storms with rainfall in the 90 to 100 mm range.

Basin Runoff Potential :

d = 50mm, T_p = 20hrs, q = 0.7 cms/km^2.
Gross DA = 845 km^2.
Q_p = 590 cms.

Conclusion :

The channel capacity estimate is consistent with historic observations and is within the basin runoff potential.

Recommended parameters : Y = 4.0 m, V = 2.1m/s, Q = 180cms.
