BF 70763 Local Road Over Grande Prairie Ck
Hydrotechnical Summary

Channel Capacity :

S = 0.002
B = 5 m, h = 2.5 m, T_h = 12 m
Use n = 0.045

At Bank Height : Y = 2.5 m, V = 1.3 m/s, Q = 30 cms
At Channel Capacity : Y = 3.5 m, V = 1.9 m/s, Q = 60 cms

Historical Highwater Data :

A 1966 report notes a HWM with Y = 3.3m and estimates Q = 42cms. A 1997 BIM report notes a HWM with Y = 2m.

WSC gauges 07GE003 (1969 – Now, DA = 152 km^2) reports Q = 64cms (stage rise = 5.7m, located u/s of culvert) in June 1990 with highest measured Q = 23cms (Y = 2.8m, April 1974). The largest storms in the database for this basin are in the range of 100 – 110mm in July 1935, and June 1964, 1965, and 1990.

Basin Runoff Potential :

d = 60mm, T_p = 20hrs, q = 0.85 cms/km^2.
DA = 167 km^2.
Q_p = 140 cms.

Conclusion :

The channel capacity estimate is consistent with historic information and within the basin runoff potential.

Recommended Parameters : Y = 3.5 m, V = 1.9 m/s, Q = 60 cms.
