BF 07053 Local Road Over Pine Ck
Hydrotechnical Summary

Channel Capacity :

S = 0.00025
B = 10 m, h = 3.0 m, T_h = 20 m
Use AT equation

At Bank Height : Y = 3.0 m, V = 0.9 m/s, Q = 40 cms
At Channel Capacity : Y = 4.0 m, V = 1.1 m/s, Q = 75 cms

Historical Highwater Data :

HW was noted in 1913 (washout), May 1956 (Y = 3m, washout), April 1963 (Y = 2.7m), and May 1974 (washout at east abutment, drift). The 1955 design was based on Y = 3.3m.

WSC gauge 07CA005 (DA = 1450km^2, 1967 – Now) reports Q = 94cms (April 1997), Q = 87cms (April 1974), and Q = 74cms (April 1971). The largest gauging is for Q = 78cms with a stage rise of 4.4m and flow well overbank. Gauge 07CA901 (DA = 255km^2, 1981 – 1983) reports Q = 17cms in July 1981. There are no storms in the database that exceed 100mm of rainfall for this area.

Basin Runoff Potential :

d = 40mm, T_p = 20hrs, q = 0.55 cms/km^2.
Gross DA = 455 km^2.
Q_p = 250 cms.

Conclusion :

The channel capacity estimate is consistent with historic HW observations and within the basin runoff potential.

Recommended parameters : Y = 4.0 m, V = 1.1 m/s, Q = 75 cms.
