

Vertical Bridge Clearances:

This list contains bridges on the Primary Highway system only (two & three digit highway numbers). Only structures within the city boundaries that are the responsibility of Alberta Infrastructure and Transportation are included in this list. All other structures within city boundaries are not included.

NOTE: This electronic service is meant to be a simplified guide to certain parts of the acts and regulations, and not a substitute for them.

Alberta Infrastructure and Transportation, Transport Engineering Branch, is not responsible for any omissions in the following documents. It is the responsibility of the transporter to consult the regulations for the exact requirement before moving shipments.

- Allowance shall be made for variations in road surface due to ice, dirt, etc.
- Legal vertical height is 4.15 metres.
- All dimensions are in metres.
- Overhead signs are not included, but generally have 5.5 metres clearance.

Clearances given are minimum available. Due to slope of the overpass and/or the roadway, this dimension may not be constant over the width of the roadway. Therefore, these structures are not to be used to measure the heights of loads.
