

STUDY PURPOSE

Alberta Transportation, in cooperation with the City of Calgary and the Municipal District of Rocky View completed the East Freeway Functional Planning Study in April 2006. 84 Street SE will not be a continuous road once the East Freeway is constructed because of the space requirements between interchange ramps and road intersections.

CH2M HILL has been retained to review and update the options available to ensure local traffic on 84 Street SE can access the East Freeway both northbound and southbound on **opening day**.
