

Rainline Pavement Marking On Deerfoot Trail

Applied: July 2007

Evaluated: July 12, 2007

Fresh Rainline marking

milling of pavement

Template control, marking is flush with pavement

Several improvements have been made to the Rainline markings. The milling blades have been adapted to better perform on Alberta aggregates and the marking is placed flush with the pavement for better protection against snow-plows.

Several retro readings were taken on the Rainline markings placed in 2006. The retro readings averaged in the 170's millicandeles. The 2006 Rainline markings are providing excellent delineation.
