Propex Landlok S2	Product ID: 8132-2-2 Initiation Date: Sept 5, 2002 Expiry: Nov 19, 2008 Status: Trial Inspected by: F. Cheng On: October 21, 2009
-------------------	--------------------------------------------------------------------------------------------------------------------------------------------------

Project	Description	Application Date
H595:02, BF82178, BF1616 (E. of H808 to RR250) (6202/04)	Applied to steep ditches on both sides of culverts. Other ESC measures were also used, such as rock checks, georidge, silt fence and riprap.	2005
H881 Conklin (6975/05)		2005

Propex Landlok S2 was applied to steep ditches on both sides of culverts at a number of locations during highway rehabilitation and paving. Other ESC measures were also used, such as rock checks, georidge, silt fence and riprap. Grass catch was very good and generally there are no signs of erosion along ditches or on steep slopes. All exposed Landlok S2 has been decomposed, including straw and netting. Netting is still visible underneath the silt fence. Remnants of silt fence and georidge could have been removed after vegetative establishment.

Recommendation:

Advance to Proven status

H595:02, BF82178, BF1616 (E. of H808 to RR250)
